

You are building a scalable lead generation and conversion system for a funding company focused on service/trade businesses.

The system must prioritize:

- High-quality lead intake
- Pre-qualification before calls
- Automation where possible
- Clear user flow from ad → application → call → funding

CORE FUNNEL STRUCTURE

Traffic Sources:

- Paid Ads (primary driver)
- Organic Content (trust + long-term growth)

Flow:

Ad → Landing Page → Application (Interactive) → Pre-Qualification → Contact → Funding Call → Close

LANDING PAGE STRUCTURE

The website should be modeled after a high-converting service funnel (reference: Staten Island Wash Kings system).

Key features:

- Mobile-first design
- Fast load speed
- Minimal distractions
- Clear call-to-action

Sections:

1. Headline (clear, bold positioning)
2. Subheadline (who it's for + outcome)
3. Authority (founder story, real operator)
4. Qualification CTA ("See If You Qualify")
5. Short proof / credibility
6. Simple breakdown of process

APPLICATION EXPERIENCE (CRITICAL DIFFERENTIATOR)

The application should feel like an interactive module, not a boring form.

Features:

- Step-by-step questions
- Progress bar
- “Game-like” experience

UX Idea:

- Loading screen with animation (hands building / hammering)
- Text: “Reviewing your information...” / “Checking if you qualify...”

IMPORTANT:

This “approval” is NOT actual funding approval.

It is:

- Passing basic criteria
- Qualifying them for a funding call

DATA COLLECTION (PRE-SCREENING)

Collect:

- Business type
- Monthly revenue
- Time in business
- What they want funding for
- Current capacity constraints

Goal:

By the time you contact them, you already know:

- If they are a real operator
- If funding makes sense
- How to position the call

FOLLOW-UP SYSTEM

Immediately after submission:

- Automated text confirmation
- Email confirmation
- Internal notification (you/team)

Messaging:

"Based on your responses, it looks like you may qualify. We'll reach out to go over your options."

Then:

→ Manual or semi-automated outreach to book call

CALL STRUCTURE (IMPORTANT)

This is NOT a generic funding call.

It is:

1. Confirm demand exists
2. Identify capacity constraint
3. Validate use of funds
4. THEN introduce funding

Position:

"We only move forward if this actually helps you make more money."

ORGANIC + CONTENT SYSTEM

Purpose:

- Build trust
- Increase inbound leads over time
- Support paid ads

LINKEDIN

- Daily/consistent posting
- Operator insights

- Scaling advice
- Hiring someone to manage growth + posting

INSTAGRAM

- Short-form content
- Real business clips (equipment, crews, growth)
- Authority positioning

BLOGS (SEO)

- Articles targeting:
 - "How to scale a roofing business"
 - "When to buy more equipment"
- Backlinks for domain authority

REDDIT STRATEGY

1. Create a community:
 - Focus: Service business scaling
 - Provide value first
2. Direct engagement:
 - Answer questions
 - Give real advice
 - Soft-direct to brand

PAID ADS STRATEGY

Primary driver of leads.

Creative:

- AI-generated commercial (high quality)
- Focus on:
 - Scaling

- More crews
- More jobs
- Not “funding”

Everything else (organic) supports trust.

TEAM STRUCTURE

Outsource:

- LinkedIn growth + posting
- Instagram content
- Blog writing (SEO + backlinks)
- Reddit engagement

Goal:

Let specialists handle content while core focus remains on:

- Closing deals
- Managing funding relationships

CORE OBJECTIVE

Build a system where:

- Paid ads generate consistent leads
- Organic builds authority and trust
- Pre-qualification filters bad leads
- Only high-quality operators reach calls

Ultimate Goal:

Leads generated should cover system costs and generate profit through funded deals.

IMPORTANT PRINCIPLE

This is not a volume game.

This is:

- High-quality operators

→ High-conviction deals

→ Repeatable scaling system

Avoid:

- Generic messaging

- Low-quality leads

- Funding unqualified businesses
