

Built Together Funding Corp

Missing Context Pack for Cursor

Implementation rules for compliance, scoring, CRM logic, analytics, automations, QA, and deployment.

Purpose: Add this PDF to a new `/context/08-missing-context` folder so Cursor can combine it with the existing brand, strategy, site-reference, and stack PDFs.

Recommended local folder

```
C:\Users\Asus\BTF CORP\context\08-missing-context\BTF_Missing_Context_Pack_for_Cursor.pdf
```

Cursor note: PDFs can work as context, but markdown/text files are usually easier for Cursor to parse and edit. This PDF is written in implementation-ready language so it can still be added directly as context. If Cursor struggles with PDF parsing, copy sections into .md files later.

Source context this pack complements

- 01-brand: Built Together Funding brand kit and visual direction.
- 02-strategy: funding company positioning and system strategy.
- 03-site-references: reference-site analysis prompt and UX/funnel goals.
- 04-stack: Next.js/Vercel/Supabase/Resend/Twilio stack handoff.
- 05-07 folders: recommended place for compliance, funnel, and content files if this pack is later split into markdown.

Contents

1. Quick correction on the folder setup	2
2. Core missing items this PDF adds	3
3. Non-negotiable brand and positioning rules	4
4. Compliance and disclaimer requirements	5
5. Funding product clarity	6
6. Interactive application question set	7
7. Lead scoring rules	8
8. CRM and Supabase data model	9
9. API and automation requirements	10
10. SMS and email templates	11
11. Tracking and analytics plan	12
12. Website structure and page requirements	13
13. Content and SEO expansion	14
14. Asset checklist	15
15. Design system requirements	16
16. QA and deployment checklist	17
17. Cursor prompt update	18
18. Build roadmap Cursor should follow	19
19. Final do and do not rules	20

1. Quick correction on the folder setup

You did the right thing putting the PDFs into the designated folders. The missing markdown files are not mandatory for Cursor to start. However, markdown is better for anything Cursor needs to repeatedly reference, edit, or implement exactly. This PDF can serve as the single missing-context document now; later it can be split into .md files if needed.

Best next move: create /context/08-missing-context and place this PDF inside it. Then tell Cursor: "Read every PDF in /context before building. Treat /08-missing-context as the implementation rules for compliance, scoring, CRM, analytics, and QA."

2. Core missing items this PDF adds

- Legal/compliance disclaimers so the funnel does not imply guaranteed approval.
- Pre-qualification logic so the application filters for real operators instead of collecting weak leads.
- Supabase data model and status lifecycle for CRM-ready lead storage.
- Email/SMS automation language for applicant and internal notifications.
- Analytics and ad conversion tracking requirements.
- Admin dashboard requirements for reviewing, contacting, and closing leads.
- Content and SEO expansion plan for service/trade business owners.
- QA, deployment, and build-check instructions so the site ships cleanly.

3. Non-negotiable brand and positioning rules

Main message: Built Together Funding helps service businesses scale capacity using capital only when it actually increases profit.

- The brand is operator-led, selective, premium, rugged, and modern.
- The site should feel like a high-trust growth partner for trades, not a cash-advance shop.
- The user should feel: "These people understand my business and know when capital helps or hurts."
- The copy should filter out startups, desperate borrowers, and unproven businesses.
- Funding language must stay strategic: equipment, crews, trucks, lead flow, working capacity, growth bottlenecks.
- Never make reckless claims about guaranteed approval, guaranteed terms, guaranteed revenue, or guaranteed profit.

4. Compliance and disclaimer requirements

This is not legal advice. Before paid ads go live, a finance/compliance attorney should review the final website, funnel copy, SMS consent language, and disclosures. Cursor should still build the framework and placeholder pages now.

Visible disclaimer language to place across the site

- Pre-qualification is not a funding approval.
- All funding options are subject to review, underwriting, verification, partner availability, and final approval.
- Built Together Funding does not guarantee approval, rates, terms, savings, revenue growth, or profit increases.
- Submitting an application authorizes Built Together Funding to contact the applicant about business funding options.
- SMS consent is optional and not required to submit the application. Message and data rates may apply. Reply STOP to opt out.
- Funding should only be considered when the business has demand, revenue, and a clear use of capital.

Pages Cursor must build

- /privacy-policy - explains data collection, contact permissions, analytics, cookies, and third-party services.
- /terms - use of site, no guarantees, no financial advice, limitation of liability, and user responsibilities.
- /disclosures - pre-qualification disclosure, funding partner review, no guaranteed approval, and underwriting language.
- /contact - include opt-out and contact-preference language.

Words to avoid or restrict

- Avoid: "guaranteed approval", "instant approval", "everyone qualifies", "no risk", "free money", "guaranteed profit", "guaranteed savings".
- Use instead: "may qualify", "pre-screened", "funding review", "strategy call", "options may be available", "subject to review".

5. Funding product clarity

Cursor should not leave the offer vague. The site should explain the most common strategic use cases without over-promising a specific product type.

- Equipment funding - rigs, trailers, machinery, tools, pumps, surface cleaners, generators, compressors.
- Truck and vehicle expansion - when a business needs another crew or service vehicle.
- Crew ramp-up capital - hiring, onboarding, payroll buffer, uniforms, safety gear, supplies.
- Marketing growth capital - only when the offer, sales process, and lead channel are already proven.
- Working capital - short-term operational capacity, materials, deposits, inventory, job mobilization.
- Seasonal ramp capital - used before busy seasons when demand is predictable.

Copy rule: Position capital as a tool for capacity expansion, not as rescue money.

6. Interactive application question set

Build the /apply page as a multi-step module with progress, transitions, and a result screen. It should feel more like a guided operator assessment than a bank form.

Step flow

- Step 1: Business identity - owner name, business name, industry, website/social link.
- Step 2: Business maturity - time in business, monthly revenue, annual revenue range.
- Step 3: Growth pressure - booked out, turning down work, waiting list, seasonal demand, capacity bottleneck.
- Step 4: Capital use - equipment, trucks, crew, marketing, working capital, materials, other.
- Step 5: Funding need - amount requested, timeline, urgency, existing advances/funding.
- Step 6: Verification - bank statements available, business bank account, best time to contact.
- Step 7: Contact - phone, email, SMS consent checkbox, final submit.

Question copy examples

- What type of business do you run? - select - filters for service/trade focus.
- How long have you been in business? - select - determines maturity and risk.
- What is your average monthly revenue? - select - main pre-qualification signal.
- What would this capital help you add? - multi-select - identifies capacity expansion use case.
- Are you currently booked out or turning down work? - yes/no - confirms demand exists.
- What is the biggest bottleneck stopping growth right now? - textarea/select - gives sales-call positioning.
- How much funding are you looking for? - select - matches need to potential products.
- Do you currently have active business funding or advances? - yes/no/select - helps avoid over-stacked deals.
- Can you provide recent business bank statements if requested? - yes/no - filters readiness.
- Best time for a funding strategy call? - select - improves follow-up speed.

7. Lead scoring rules

Cursor should implement simple scoring in code. This is not underwriting. It is internal pre-screening to decide how the lead should be routed.

Scoring model

```
Start lead_score = 0

Industry fit:
+15 if roofing, exterior cleaning, landscaping, construction, trades, contracting, builders
+8 if other local service business
-15 if startup idea, ecommerce only, real estate investing, personal loan, consumer request

Time in business:
+20 if 2+ years
+12 if 12-24 months
+6 if 6-12 months
-20 if under 6 months or not launched

Monthly revenue:
+25 if $50k+/month
+18 if $25k-$50k/month
+10 if $10k-$25k/month
+3 if under $10k/month but established
-20 if no revenue

Use of funds:
+20 if equipment, trucks, crews, proven ads, job materials, capacity expansion
+8 if working capital with clear reason
-15 if vague, emergency survival, personal expenses, debt-only use

Demand/capacity:
+20 if booked out, turning down work, or has proven lead flow
+10 if demand is seasonal but predictable
-15 if no demand or no clear sales pipeline

Readiness:
+10 if can provide bank statements
+8 if best contact time provided
-10 if unwilling to provide business documentation

Existing funding:
+0 if none or manageable
-10 if active funding exists but unclear
-25 if heavily stacked or using new funding only to pay old funding

Routing:
70+ = prequalified
45-69 = needs_review
0-44 = not_fit_yet
```

Result screen language

- Prequalified: "Based on your answers, your business may be a fit for a funding strategy review."
- Needs review: "We need to review a few details before determining fit."
- Not fit yet: "This may not be the right fit yet, but we can still review your information."

Never show "Approved" or "Guaranteed" on any result screen.

8. CRM and Supabase data model

Cursor should create a Supabase-compatible lead model now, even if the admin dashboard ships later. This keeps all application data usable from day one.

Lead status lifecycle

```
new -> prequalified -> contacted -> call_booked -> submitted_to_partner -> funded
new -> needs_review -> contacted -> call_booked -> submitted_to_partner -> funded
new -> not_fit -> nurture_or_lost
Any status -> lost
```

Suggested fields

```
leads
- id uuid primary key
- created_at timestamp with time zone default now()
- updated_at timestamp with time zone default now()
- name text
- business_name text
- phone text
- email text
- website text
- industry text
- monthly_revenue text
- annual_revenue text
- time_in_business text
- funding_amount text
- use_of_funds text[]
- capacity_constraint text
- booked_out boolean
- turning_down_work boolean
- adding_equipment boolean
- hiring_crew boolean
- increasing_ads boolean
- active_funding text
- can_provide_statements boolean
- best_time_to_contact text
- sms_consent boolean default false
- lead_score integer
- lead_status text default 'new'
- source text
- landing_path text
- utm_source text
- utm_medium text
- utm_campaign text
- utm_term text
- utm_content text
- raw_answers jsonb
- notes text
```

Admin dashboard requirements

- Protected admin route, not publicly accessible.
- Lead table with filters by status, score, date, source, and industry.
- Lead detail view with all application answers, score breakdown, and contact buttons.
- Ability to update status and add internal notes.
- CSV export for partners or manual review.
- Future phase: partner assignment, funding outcome, commission tracking, and automated follow-up sequences.

9. API and automation requirements

Application submit API

```
POST /api/apply
1. Validate payload with Zod.
2. Normalize phone/email fields.
3. Calculate lead_score and lead_status.
4. Capture UTM parameters and landing path.
5. Save lead to Supabase.
6. Send internal email notification through Resend.
7. Send internal SMS through Twilio if configured.
8. Send applicant confirmation email.
9. Send applicant confirmation SMS only if sms_consent = true.
10. Return safe result object to frontend: { status: 'prequalified' | 'needs_review' | 'not_fit_yet' }
```

Environment variables

```
NEXT_PUBLIC_SITE_URL=
NEXT_PUBLIC_PHONE=
NEXT_PUBLIC_PHONE_DISPLAY=
NEXT_PUBLIC_SUPABASE_URL=
NEXT_PUBLIC_SUPABASE_ANON_KEY=
SUPABASE_SERVICE_ROLE_KEY=
RESEND_API_KEY=
RESEND_FROM_EMAIL=
INTERNAL_NOTIFICATION_EMAIL=
TWILIO_ACCOUNT_SID=
TWILIO_AUTH_TOKEN=
TWILIO_PHONE_NUMBER=
INTERNAL_NOTIFICATION_PHONE=
NEXT_PUBLIC_GA4_ID=
NEXT_PUBLIC_META_PIXEL_ID=
NEXT_PUBLIC_GOOGLE_ADS_ID=
GOOGLE_ADS_CONVERSION_LABEL=
```

10. SMS and email templates

These messages should be short, direct, and compliant. Use them as defaults that Cursor can place into `/lib/messages.ts` or similar.

Applicant SMS confirmation

Built Together Funding: Thanks for applying. Based on your responses, your business may be a fit for a funding review. Our team will reach out to go over details. This is not a funding approval. Reply STOP to opt out.

Applicant email confirmation

Subject: We received your Built Together Funding application

Thanks for applying with Built Together Funding.

Based on your responses, your business may be a fit for a funding strategy review. Our team will look over the information and reach out to discuss your options.

Important: this is not a funding approval. Any funding options are subject to review, verification, underwriting, and partner availability.

Built Together Funding Corp

Internal notification email

Subject: New BTF application - {{business_name}} - Score {{lead_score}}

New funding application submitted.

Name: {{name}}

Business: {{business_name}}

Phone: {{phone}}

Email: {{email}}

Industry: {{industry}}

Monthly Revenue: {{monthly_revenue}}

Time in Business: {{time_in_business}}

Funding Amount: {{funding_amount}}

Use of Funds: {{use_of_funds}}

Capacity Constraint: {{capacity_constraint}}

Lead Score: {{lead_score}}

Lead Status: {{lead_status}}

Source: {{utm_source}} / {{utm_campaign}}

Open admin dashboard to review.

11. Tracking and analytics plan

Because paid ads are the main driver, tracking must be built into the site from version 1. Cursor can create placeholder functions even before the final ad accounts are connected.

Events to track

- cta_click - when a user clicks See If You Qualify or Apply.
- application_start - first interaction on /apply.
- application_step_complete - each completed step.
- application_submit - final submission attempt.
- prequalified_lead - result status equals prequalified.
- needs_review_lead - result status equals needs_review.
- phone_click - tap/click phone number.
- email_click - tap/click email.
- calendar_click - if a booking link is added later.

UTM capture

When a user lands on the site, capture these from the URL and persist in localStorage/session:

- utm_source
- utm_medium
- utm_campaign
- utm_term
- utm_content
- gclid
- fbclid
- landing_path

Attach them to every application submission.

12. Website structure and page requirements

Recommended routes

```
/
/apply/
/how-it-works/
/who-we-help/
/funding-uses/
/about/
/resources/
/contact/
/privacy-policy/
/terms/
/disclosures/
```

Homepage sections

- Hero: direct offer, operator-led headline, primary CTA.
- Proof/authority: founder background and service-business experience.
- Who we help: serious service/trade operators.
- Who we do not help: startups, no-revenue businesses, unclear use cases.
- Funding use cases: equipment, trucks, crews, marketing capacity, materials.
- Interactive application preview: progress module teaser.
- Process: apply, pre-screen, funding call, review options, deploy capital.
- Founder philosophy: capital should solve a capacity constraint.
- FAQ: compliance-safe answers.
- Final CTA: see if your business may qualify.

13. Content and SEO expansion

The site should be able to grow into an authority engine for service business scaling. Build /resources even if only placeholder posts ship at first.

SEO page ideas

- Funding for roofing companies.
- Funding for pressure washing and exterior cleaning businesses.
- Equipment funding for service businesses.
- How to know when your business is ready for a second crew.
- When to use business funding for marketing.
- How contractors can use capital without hurting cash flow.
- Capacity expansion guide for service businesses.
- Working capital for contractors with booked jobs.

FAQ questions

- Does pre-qualification mean I am approved?
- What types of businesses do you work with?
- What should funding be used for?
- Do you work with startups?
- How fast can I receive options?
- Will applying affect my credit?
- What documents may be needed?
- What if I already have active funding?
- Why do you ask about demand and capacity?
- How is Built Together Funding different from a typical funding broker?

14. Asset checklist

Before launch, add as many real proof assets as possible. The site can ship with placeholders, but real media will make the brand significantly more trustworthy.

- Built Together Funding logo in SVG/PNG.
- Original blue logo/color reference images.
- Founder photo or cinematic operator photo.
- Service-business photos: trucks, equipment, crews, job sites, tools, before/after scenes.
- Staten Island Wash Kings screenshots or proof assets if legally/strategically appropriate.
- Funding proof/case studies only if allowed and anonymized.
- Short founder video script for future hero or about page.
- Trust badges only if real. Do not invent badges, reviews, partner logos, or guarantees.

15. Design system requirements

Cursor should turn the brand kit into a reusable design system instead of hardcoding random section styles.

- Dark backgrounds: #0A0A0A, #121212, #1A1A1A.
- Electric blue accents: #35C2FF, #4FBFFF, #6FD3FF.
- Use blue for CTAs, progress bars, icons, hover states, borders, and controlled glows.
- Use premium card surfaces with subtle borders and shadows.
- Mobile-first spacing: sections should stack cleanly and CTA buttons must be thumb-friendly.
- Animations should feel smooth and expensive, not gimmicky.
- Application UI should feel interactive with progress, selected states, loading, and result cards.
- Avoid clutter, stock finance imagery, spammy money graphics, and generic bank visuals.

16. QA and deployment checklist

Local checks

- npm install completes without dependency conflicts.
- npm run lint passes or only reports intentional warnings.
- npm run build completes successfully.
- All routes render on mobile and desktop.
- Application submission validates required fields correctly.
- Supabase insert works with valid env variables.
- Result screen never says approved.
- Confirmation emails/SMS are only sent when keys are configured.
- No fake trust badges, fake reviews, fake guarantees, or copied reference-site content.

Vercel checks

- Set all environment variables in Vercel project settings.
- Redeploy after env changes.
- Test production /apply submission.
- Check internal email notification.
- Check applicant email and SMS consent behavior.
- Verify analytics scripts load only when IDs exist.
- Verify privacy, terms, and disclosures links are visible in footer.

17. Cursor prompt update

Paste this after your main Cursor prompt once this PDF is inside /context/08-missing-context.

Additional context update:
Read /context/08-missing-context/BTF_Missing_Context_Pack_for_Cursor.pdf before coding.
Use it as the implementation rules for compliance, scoring, CRM, analytics, automations, QA, and deployment.

Do not only build a nice homepage. Build the lead-generation system:

- homepage
- interactive /apply funnel
- pre-qualification scoring
- Supabase lead capture
- safe result screen language
- internal notifications
- applicant confirmation messages
- UTM capture
- analytics event hooks
- legal placeholder pages
- admin-ready data model

Hard rules:

- Do not say approved.
- Do not guarantee funding.
- Do not promise rates, terms, profit, savings, or revenue increases.
- Do not copy reference websites.
- Build mobile-first.
- Use the dark industrial luxury design system with electric blue accents.
- Treat capital as a strategic capacity tool, not desperate cash.

Build in phases and run npm run build before finalizing.

18. Build roadmap Cursor should follow

1. Phase 1: Scaffold Next.js 15 App Router project with TypeScript, Tailwind, ESLint, and Vercel config.
2. Phase 2: Build design system: typography, colors, buttons, cards, section wrappers, CTA components.
3. Phase 3: Build homepage and core marketing pages.
4. Phase 4: Build /apply interactive multi-step funnel with scoring.
5. Phase 5: Build Supabase integration and submit API.
6. Phase 6: Add Resend/Twilio notification support with safe fallbacks.
7. Phase 7: Add legal pages and footer links.
8. Phase 8: Add analytics/UTM capture hooks.
9. Phase 9: Add admin-ready schema notes and optional admin dashboard shell.
10. Phase 10: Run build/lint, fix errors, and produce deployment instructions.

19. Final do and do not rules

Do

- Make the site feel premium, selective, and built by operators.
- Make the application feel interactive and intentional.
- Use scoring to filter lead quality.
- Collect enough information to make the follow-up call intelligent.
- Make legal/disclosure language visible but not ugly.
- Use real proof assets when available.
- Keep copy direct, confident, and clean.

Do not

- Do not make the site look like a generic loan broker.
- Do not use fake approvals or fake scarcity.
- Do not create a boring one-page form with no funnel experience.
- Do not use cheap stock-money graphics.
- Do not bury disclaimers where users cannot see them.
- Do not forget UTM tracking and lead source capture.
- Do not launch paid ads before legal review.

Final instruction for Cursor: Build the brand as a full conversion system, not just a website. The website is the front end. The real product is the qualified lead flow: ad -> trust -> application -> pre-screen -> follow-up -> funding strategy call. End

of handoff document.
